Career Objective

Computer Networks and Data Communications student with hands-on experience in AWS cloud infrastructure, OpenStack labs, Linux administration, infrastructure automation, and CI/CD. Interested in building and operating secure, reliable cloud systems. Expected to graduate in July 2026 and available for full-time work.

Education

University of Information Technology, VNU-HCM

Ho Chi Minh City, Vietnam

Bachelor of Engineering in Computer Networks and Data Communications

2023 – Expected Jul 2026

- **GPA:** 8.68 / 10.0 | **Expected Graduation:** July 2026
- **Core Coursework:** Computer Networks, Network Security, Cloud Computing, Linux System Administration, Database Systems

Technical Skills

Cloud & DevOps: AWS EC2, VPC, S3, IAM, NAT Gateway, OpenStack, Terraform, Docker, Kubernetes, GitHub Actions, Argo CD, CI/CD, GitOps

Linux & Monitoring: Linux administration, Ubuntu, Bash/Shell, Prometheus, Grafana, Jaeger, log/metric collection, troubleshooting, AWS CLI

Networking: TCP/IP, DNS, HTTP/HTTPS, OSI model, VLAN, Routing, VPN, Firewall basics, Cloud Networking

Programming & Databases: Python, Bash/Shell, SQL, C++, JavaScript, HTML/CSS, PostgreSQL, MySQL

Data & MLOps: Airflow, MLflow, MinIO, Model Registry, data preprocessing, Scikit-learn, Root Cause Analysis

Tools & Languages: Git, GitHub, Postman, VS Code, Vietnamese native, English - TOEIC Speaking & Writing 280/400

Projects

3-Tier DevSecOps & GitOps Platform on K3s | GitHub *(Team project of 4)*

AWS EC2 · Terraform · K3s · Docker · GitHub Actions · Argo CD · Argo Rollouts · Kustomize · Prometheus · Grafana

- Contributed to an e-commerce microservices platform with React frontend, API Gateway, Keycloak, Spring Boot services, MongoDB/PostgreSQL, and Kafka-based payment/inventory events.
- Owned the CI/CD implementation with GitHub Actions, including path-based service workflows, unit test gates, Docker image builds/publishing, and branch-based dev/main release flows.
- Configured Argo CD, Image Updater, and Kustomize for declarative synchronization across separate staging and production environments.
- Integrated smoke-test gates and Argo Rollouts canary delivery into the release flow, with HPA scaling and Prometheus/Grafana observability supporting deployment validation.

AWS Hybrid Cloud Infrastructure | GitHub

AWS · Terraform · EC2 · VPC · IAM · NAT Gateway · WireGuard VPN · RADIUS · S3 · EBS

- Designed and provisioned an AWS hybrid-cloud network for an NT-UIT campus scenario, including VPC 10.30.0.0/16, public subnets, private App/DB/Research/Management subnets, route tables, Internet Gateway, and NAT Gateway.
- Implemented secure administration through a Bastion Host and WireGuard VPN, allowing remote users to reach private EC2 workloads without exposing those instances directly to the Internet.
- Segmented App, DB, Research, and Management tiers with dedicated routing and security groups; provided controlled outbound access through NAT Gateway and private S3 access through a Gateway VPC Endpoint.

AIOps and MLOps Platform | GitHub

Python · Kubernetes · Docker · Airflow · MLflow · MinIO · PostgreSQL · Prometheus · Grafana · Jaeger

- Built a Kubernetes-based AIOps platform for anomaly detection, root cause analysis ranking, runtime inference, and incident feedback collection from microservice observability data.
- Implemented an MLOps workflow with Airflow pipelines, MLflow model registry, MinIO artifact storage, model promotion, rollback, and production inference management.
- Developed and compared RCA pipelines using Random Forest, GAT, and HGNN models to rank likely root causes from microservice telemetry and incorporate incident feedback into retraining.
- Integrated Prometheus, Grafana, and Jaeger to collect metrics, visualize dashboards, trace service behavior, and support observability-driven troubleshooting.
