SUMMARY

Computer Networks and Data Communications student with hands-on experience in AWS, Terraform, Docker, Kubernetes, CI/CD, GitOps, Linux, and monitoring. Interested in cloud infrastructure, automation, and reliable deployment workflows. Expected to graduate in July 2026 and available for full-time work.

EDUCATION

University of Information Technology, VNU-HCM

2023 – Expected Jul 2026

Bachelor of Engineering in Computer Networks and Data Communications

Ho Chi Minh City, Vietnam

- **Year:** Third-year student | **GPA:** 8.6/10
- **Relevant Coursework:** Computer Networks, Network Security, Cloud Computing, Linux System Administration, Database Systems

SKILLS

Programming & Scripting: Python, Bash/Shell, SQL, C++, JavaScript basic, HTML/CSS basic

Cloud & DevOps: AWS EC2, VPC, IAM, S3, NAT Gateway, Terraform, Docker, Kubernetes, GitHub Actions, Argo CD, CI/CD, GitOps

Linux & Monitoring: Linux, Ubuntu, Prometheus, Grafana, Jaeger, log/metric collection, basic troubleshooting

Networking: TCP/IP, DNS, HTTP/HTTPS, OSI model, VLAN, Routing, VPN, Firewall basics, Cloud Networking

Data & MLOps: PostgreSQL, MySQL, Airflow, MLflow, MinIO, Model Registry

Tools: Git, GitHub, Postman, VS Code, AWS CLI

Languages: Vietnamese native, English - TOEIC Speaking & Writing 280/400

PROJECTS

3-Tier DevSecOps & GitOps Platform on Self-Managed K3s Cluster | GitHub (*Team project of 4*)

- **Tech Stack:** AWS EC2, Terraform, K3s, Docker, GitHub Actions, Argo CD, Argo Rollouts, Kustomize, Prometheus, Grafana
- Contributed to an e-commerce microservices platform with React frontend, API Gateway, Keycloak, Spring Boot services, MongoDB/PostgreSQL, and Kafka-based payment/inventory events.
- Owned the CI/CD implementation with GitHub Actions, including path-based service workflows, unit test gates, Docker image builds/publishing, and branch-based dev/main release flows.
- Configured GitOps delivery with Argo CD, Image Updater, and Kustomize for separate staging/production environments, supporting smoke tests, canary rollout, HPA, and Prometheus/Grafana observability.

AWS Hybrid Cloud Infrastructure | GitHub

- **Tech Stack:** AWS, Terraform, EC2, VPC, IAM, NAT Gateway, WireGuard VPN, RADIUS, S3, EBS
- Designed and provisioned an AWS hybrid-cloud network for an NT-UIT campus scenario, including VPC 10.30.0.0/16, public subnets, private App/DB/Research/Management subnets, route tables, Internet Gateway, and NAT Gateway.
- Deployed Bastion Host, WireGuard VPN Server, internal App Server, RADIUS Server, Research VM, dedicated EBS storage, and S3 Gateway VPC Endpoint for secure private access.

AIOps and MLOps Platform | GitHub

- **Tech Stack:** Python, Kubernetes, Docker, Airflow, MLflow, PostgreSQL, Prometheus, Grafana, Jaeger
- Built a Kubernetes-based AIOps platform with anomaly detection, root cause analysis ranking, runtime inference, and incident feedback collection services.
- Implemented an MLOps workflow with Airflow pipelines, MLflow model registry, artifact storage, model promotion, rollback, and production inference management.
- Integrated Prometheus, Grafana, and Jaeger to collect metrics, visualize dashboards, trace service behavior, and support observability-driven troubleshooting.
